### 2020 Financial Update:

As of December 31, 2020, Cerecor had \$18.9 million in cash and cash equivalents which is a significant increase over the prior year balance of \$3.6 million. Furthermore, in January 2021, the Company closed an underwritten public offering for net proceeds of approximately \$37.6 million.

There were significant increases to most operating expenses, net loss and net loss per share related to the merger with Aevi Genomic Medicine that occurred in February 2020 (the Aevi Merger). Notably, research and development expense for the year ended December 31, 2020 significantly increased to \$32.2 million, which was driven by activities to advance the Company's expanded pipeline as a result of the Aevi Merger. There was a \$25.5 million acquired in-process research and development (IPR&D) charge in 2020 directly related to the Aevi Merger. General and administrative expense increased to \$17.4 million; the largest driver of such increase was stock-based compensation and other expenses related to leadership changes as a result of the Aevi Merger.

We believe these significant investments in our expanded pipeline and leadership team will lead to value driving milestones as our pipeline progresses toward commercialization.

#### **About Cerecor**

Cerecor is a biopharmaceutical company focused on becoming a leader in the development and commercialization of treatments for rare and orphan diseases. The company is advancing its clinical-stage pipeline of innovative therapies that address unmet patient needs within rare and orphan diseases. The company's rare disease pipeline includes CERC-801, CERC-802 and CERC-803, which are in development for congenital disorders of glycosylation and CERC-006, an oral mTORc1/c2 inhibitor in development for the treatment of complex lymphatic malformations. The company is also developing two monoclonal antibodies, CERC-002, and CERC-007. CERC-002 targets the cytokine LIGHT (TNFSF14) and is in clinical development for treatment of severe pediatric-onset Crohn's disease, and COVID-19 acute respiratory distress syndrome. CERC-007 targets the cytokine IL-18 and is in clinical development for the treatment of Still's disease (adult onset Still's disease (AOSD) and systemic juvenile idiopathic arthritis (sJIA)), and multiple myeloma (MM). CERC-006, 801, 802 and 803 have all received Orphan Drug Designation and Rare Pediatric Disease Designation, which makes all four eligible for a priority review voucher upon FDA approval.
